

Feedback module

Art. No.: 10787

This feedback module is the basis for all automatic functions to be controlled by a computer (with relevant control software): It has eight galvanically separated outputs with screw terminals, to which momentary or permanent contacts can be connected.

If a contact is activated, the corresponding LED lights up. The feedback module is connected to the z21/Z21 interface with the cable included and power is also supplied via this cable.

A total of 16 feedback modules can be connected to the interface.

This product is substituted with 10808 .
