

2 piece set dust silo wagons, GATX

Epoch: V - VI

14+

Art. No.: 849008

€75,90

Set of two dust silo wagons, type Uacs, of the GATX.

- With many attached partially perforated plug-in parts
- Combinable with blocktrains

The four-axle dust silo wagons of the class Uacs are goods wagons for the transport of bulk and dust goods. The wagons are subdivided according to their cargo: While the Uacs-x are loaded with industrial products, such as coal dust, the Uacs-y are used for the transport of food products, such as soda or flour. The massive original wagons are painted inside with an unique epoxy resin substance and have a pneumatic aerating system. Both types, the Uacs-x and the Uacs-y, have the same basic structure with UIC bogies of the type Y 25 Cs and a welded lower frame. The cars are filled via filler caps mounted on top of the container's roof, which can be reached via railings. A compressed air system empties the wagons.

Specifications:

General data

Coupling NEM shaft 355 with close coupling mechanism

Measurements

Length over buffer 238 mm
